

Friends

Wyoming is beautiful, but let's have the next meeting in Canada's tar sands. We can watch as pristine Boreal forests and wetlands are destroyed to produce some of the dirtiest oil. Sunsets over the giant toxic waste lagoons are spectacular -- just hope the ducks don't land as they fly over looking for a place to nest!

Because tar sands oil production releases up to 3X the global warming pollution per barrel as with conventional oil, we don't much like real caps on emissions, but let's keep talking . . .

Warm wishes,

Premiers of Alberta and Saskatchewan

Western Governor's

Association Meeting

Jackson Hole, Wyoming

U.S.A

*This ad is a parody and uses the office of public figures for purposes of satire.*

**Pictured here:** Canada's tarsands are the most environmentally destructive project on Earth and the country's fastest growing source of greenhouse gas emissions.
